••Background

The adventure takes place in the system Six Lights, some 20 parsecs from the Regency Frontier. Originally inhabited by a few humans and a small outpost of Droyne, the world was on the edge of rift, and normally removed from the Imperium. SuSAG LIC owns the Imperial charter for the world, but was unable to keep contact with the world as Vargr raiders descended into Corridor and locked out the Imperium from both sides. Being one of the few worlds on the very edge of the rift, and with a relatively low population and tech level, it was spared the ravages of the constant Vargr raids. It continued to maintain some trade/extortion agreements with the nearby worlds, taken over by Vargr, until the Virus came along.

When the Virus came, it came in the form of a Vargr supply ship, which accelerated into an impact crater on the surface of one of the moons. The resulting explosion destroyed the

small base on the moon and killed off the majority of the inhabitants. The Droyne, remaining on the world below, were left relatively unmolested.

Cut off from their home Oytrip, the Droyne have turned their attentions to making the world more habitable for them and expanding. The Virus destroyed most of the computer systems, but the resulting loss of tech level was only pushed down to TL8. The last 70 years have seen the Droyne's increase in population, and while small, they have diversified to the point of being able to reach into space again.
